

Internal Plywood Racking

Phoenix Van Accessories offer a complete solution for plywood racking.

All of our plywood racking is designed in house using the latest CAD technology, then cut on our state of the art CNC router. It is then assembled and installed into your vehicle.

Our design team will discuss your requirements with you, then arrange for the racking to go through our design and build process.

Our racks are built from 18mm plywood for sides, shelves and back stops and 12mm plywood for front up stands.
