

MaximRack™

A comprehensive range of modular crash tested internal racking systems which are most contemporary, lightweight yet very strong, and are designed to ideally suit your individual working or leisure requirements.

Features:

- A modular system which is designed to be functional and flexible by allowing you to determine its configuration to meet your differing storage needs with hundreds of different specifications to choose from.
- 12 different base designs (named A to L Range) which are ideally suited for tradespeople, fleet operators and single users alike.
- 'Maxim Rack' suits most small, medium or large vans.
- A very popular van storage system already adopted by Carillion plc, Chips Away, Revive and Rexel to name just a few fleet operators who benefit from these products.
- Sensitively priced to ensure affordability.
- Built using thin gauge, high tensile steel which is both lightweight and very robust.
- Grey powder-coated framework complimented by orange, Hubb Systems branded end panels to aid visibility inside your vans.
- Available supply and fitted or supply only.
- Crash tested to 20g at Horiba-Mira Test Facility ([See Video here](#)).
- Designed and tested to carry up to 25kgs per shelf (evenly distributed).
- Spare parts are readily available during the lifetime of this product.
- Supplied with all the necessary fixings which are sourced from UK suppliers.
